POTS Replacement

Analog Phone Line (POTS) Replacement Solutions

Copper phone lines that support Plain Old Telephone Service (POTS) are subject to ongoing price increases and will be decommissioned over time. This is being driven by the high cost to maintain copper lines that have limited utility in a modern business world.

Fusion Connect has the solution. We deliver a modern, reliable, and cost-effective solutions for phone service needs now and into the future.

Use Cases	Fusion Connect Solutions
Analog Endpoint Devices Many devices in office and campus locations still use copper lines for fax machines, point of sale (POS) terminals, vending machines, ATMs, gate entry systems, and paging systems.	**Digital Business Line** An analog telephone adapter solution which delivers a cost effective and reliable solution for these analog devices.
Analog Fire, Elevator, and Security Alarms Legacy elevator, security, and fire alarms generally use POTS lines to deliver a stable and reliable connection. To conform to NFPA 72 standards, next generation communications systems require a redundant power source with a minimum of 8 hours of power.	**Digital Business Line with Battery Back-up** A phone line with UPS providing a back-up battery that conforms to NFPA 72 standards. Some installations may also require redundant connectivity which may be provided with another analog line or optional wireless broadband service to deliver a resilient and reliable solution to keep critical phone services connected.
Analog Employee and Reception Phones Traditional desk and reception phone lines that run across a POTS or Centrex line into a business to deliver dial tone to individual phones.	**Hosted Voice** A full-featured, cloud-based phone service delivered over an internet connection to provide reliable office phones, that can also be used on PCs and mobile devices. No need to manage expensive central equipment or onsite hardware (PBX).
